Schéma du circuit principal

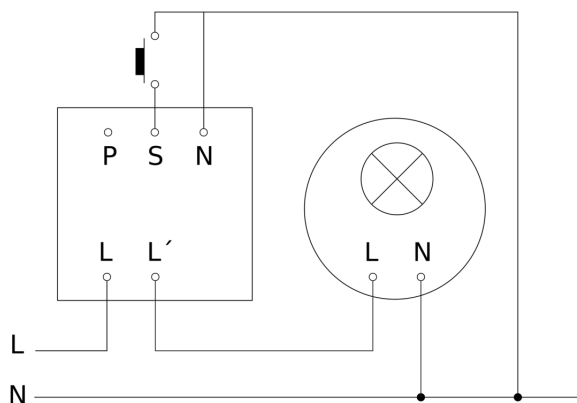

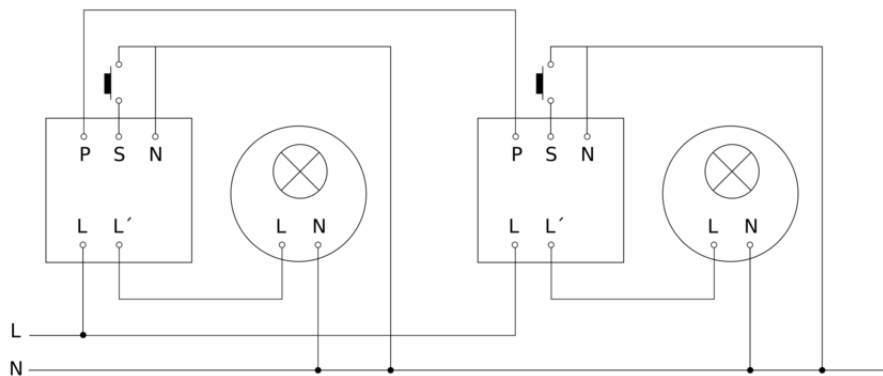

Schéma du circuit d'interconnexion maître/maître

The diagram illustrates a three-phase motor control circuit with interlocking. It features three main components: a three-phase switch (P, S, N) with a stop button (L) and a start button (L'), a three-phase motor (L, N), and a three-phase switch (P, S, N) with a stop button (L) and a start button (L'). The circuit is connected to a three-phase power supply (L, N). The interlocking is achieved by connecting the stop button (L) of one switch to the start button (L') of the other switch, ensuring that both switches cannot be closed simultaneously.
