

Detector de movimiento - Professional Line

IS 345

V3 KNX - montaje en el techo, redondo, blanco

EAN 4007841 079703

Nº de art. 079703

The diagram shows a parallel circuit. On the left, there are two horizontal lines representing the main power rails, labeled 'L' (Live) and 'N' (Neutral). A switch, represented by a rectangle with a downward arrow, is connected in parallel between these two rails. To the right of the switch, a light bulb, represented by a circle with a cross inside, is also connected in parallel between the 'L' and 'N' rails. The circuit is completed by a wire connecting the bottom of the light bulb back to the 'N' rail.

The diagram illustrates two wiring configurations for a three-phase motor. On the left, the motor is connected in a star configuration, with the neutral point connected to the N terminal of the terminal block. On the right, the motor is connected in a delta configuration, with the L and N terminals of the terminal block connected to the L and N terminals of the motor, respectively. The L and N terminals of the terminal block are connected to the L and N terminals of the motor, and the L and N terminals of the motor are connected to the L and N terminals of the terminal block.
