

# More than just light.

Sensor lights and smart design  
for greater comfort, safety and atmosphere.

# We have been making light smarter for over 35 years.

Whether for your home, garden, patio or driveway – indoors or outdoors: with sensor-controlled lighting from STEINEL, you can rely on comfort, safety and energy efficiency. To this end, we develop and manufacture sensors and lights that set standards worldwide.

Enjoy the feeling of light that simply thinks for itself – with technology from STEINEL.

## About STEINEL

# Developed in Germany. Manufactured in Europe.

STEINEL stands for quality "Made in Europe". Our outdoor lights are developed in Germany and manufactured in European factories – with the highest standards of precision, design and sustainability. The use of highly efficient LEDs permanently reduces energy consumption and ensures a long service life. The result: reliable, resource-saving products that guarantee safety and comfort for many years to come.

# We offer the right solution for every application:

Sensor

Connect

**Outdoor luminaires with built-in sensors** only switch on when needed – this saves energy, increases safety and ensures comfortable and sustainable lighting.

Solar

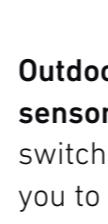

Wlan Cam

**Solar lights** with high-quality solar modules combined with powerful batteries and efficient LED technology provide independent, electricity-free lighting – without any cable installation.

On

**CAM lights** from STEINEL combine modern LED technology with a high-quality camera and intercom system. Connected via Wi-Fi, visitors can be seen and addressed in real time via smartphone – even when you are on the move.

**Outdoor lights with integrated twilight sensors** switch on when it gets dark and switch off again at daybreak. This allows you to enjoy atmospheric lighting around your home at all times – conveniently and energy-efficiently.

**Outdoor lights without sensors** are simply switched on and off as required using a light switch. This means that sensor controlled and manual lights can be combined and networked in the same design.

# Connected Lighting

## Intelligent lighting. Simply via app.

Bluetooth-enabled lights offer greater convenience, control and efficiency.

Once connected to the mains, they can be controlled and grouped together using the free STEINEL app. This allows several lights to be switched on together – for example, when a sensor detects movement on the garden path and switches on all the lights at the same time.

## Advantages of connected lighting

### Dimmable and flexible

The lights can be adjusted continuously. This ensures that you always have the right brightness – whether functional, cosy or economical. At the same time, dimming extends the service life of the LEDs.

### Individual lighting scenes

With just a few clicks, scenes can be created for specific situations: inviting light at the entrance, atmospheric terrace or bright working light. Scenes can be saved and called up at any time.

### Schedules & automation

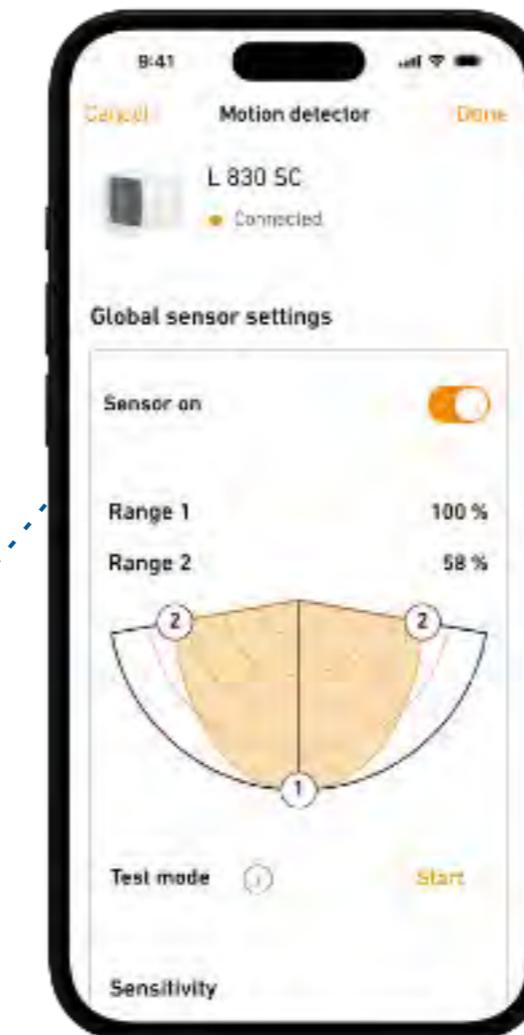

The STEINEL Connect app can be used to set up fixed schedules that adapt to everyday life. In combination with motion detectors, the light is only switched on when needed – this ensures comfort and avoids unnecessary consumption.

### Energy and cost efficiency

LED technology, dimmability and demand based control significantly reduce energy consumption – savings of up to 90% are possible. This is good for both the environment and your wallet.

### Networked control

Thanks to Bluetooth Mesh, all STEINEL Connect products can be networked across the entire range and controlled centrally. Grouping, expansion or changes can be made easily at any time – without any additional cabling.

## Modern outdoor lights.

Wall lights from STEINEL combine stylish design with intelligent technology – for lighting solutions that enhance any facade. They offer comfortable lighting, smart functions and create an atmosphere that warmly welcomes guests and residents alike.

<a href="#">4007841 069032</a>	MD IR N130	anthracite

## MD IR N270

<a href="#">4007841 079819</a>	COM1	MD IR N270	white
<a href="#">4007841 079796</a>	COM1	MD IR N270	anthracite
<a href="#">4007841 079871</a>	uDIM	MD IR N270	white
<a href="#">4007841 079857</a>	uDIM	MD IR N270	anthracite

### Technical

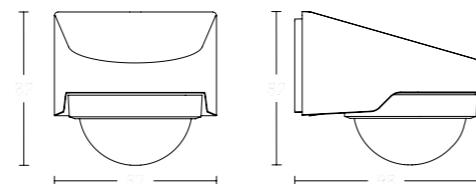

Surface-mounted motion detector with Eagle Eye technology for doubling a selected detection area. Lens can be rotated 180° for range adjustment.

### MD IR N130

Range: Radial max.  $r = 2.5$  m ( $7 \text{ m}^2$ ) Tangential max.  $r = 13$  m ( $192 \text{ m}^2$ ),  
Mounting height: 1.80 – 4.00 m, COM1: Power: max. 2000 W (LED-ready)

### MD IR N270

Range: Radial max.  $r = 2.7$  m ( $17 \text{ m}^2$ ) Tangential max.  $r = 12.5$  m ( $368 \text{ m}^2$ ),  
Mounting height: 1.80 – 6.00 m, COM1: Power: max. 2000 W (LED-ready),  
uDIM: max. 5-100 W LED phase up/down, With uDIM, soft light start and basic light can also be used for conventional luminaires, provided the light source is dimmable

With the **STEINEL Connect app**, you can customise the MD IR N130 and MD IR N270: digitally control the twilight threshold, follow-up time and detection zones, use Eagle Eye, network devices and conveniently control the light via your smartphone.

# MD IR D180

Smart detection, precise lighting.
